

Pioneer Strategic Income Fund

Performance Analysis and Market Commentary | September 30, 2024

Average Annual Total Returns for Class Y Shares

	Month-to-Date	Quarter-to-Date	Year-to-Date	1-Year	3-Year	5-Year	10-Year
Pioneer Strategic Income Fund (STRYX)	1.61%	6.33%	7.71%	15.72%	0.65%	2.78%	3.25%
Bloomberg US Universal Index (Benchmark)¹	1.37%	5.20%	4.91%	12.08%	-1.05%	0.70%	2.15%

¹The Fund's performance benchmark is shown. Information on any additional benchmark for regulatory purposes can be found in the prospectus.

Gross expense ratio: 0.75% Net Expense Ratio: 0.70%

Call 1-800-225-6292 or visit amundi.com/us for the most recent month-end performance results. Current performance may be lower or higher than the performance data quoted. The performance data quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Class Y shares are not subject to sales charges and are available for limited groups of investors, including institutional investors. Initial investments are subject to a \$5 million investment minimum, which may be waived in some circumstances. All results are historical and assume the reinvestment of dividends and capital gains. Periods of less than one year are actual, not annualized. Other share classes are available for which performance and expenses will differ.

Performance results reflect any applicable expense waivers in effect during the periods shown. Without such waivers, fund performance would be lower. Waivers may not be in effect for all funds. Certain fee waivers are contractual through a specified period. Otherwise, fee waivers can be rescinded at any time. See the prospectus and financial statements for more information.

The net expense ratio reflects the contractual expense limitation currently in effect through February 1, 2025, for Class Y shares. There can be no assurance that Amundi US will extend the expense limitation beyond such time. Please see the prospectus and financial statements for more information.

Market Review

- Despite some intra-quarter volatility, financial markets posted strong returns for Q3, as moderating inflation prompted a Federal Reserve (Fed) pivot to kick off easing with a 50 basis point (bps) rate cut, while cooling but solid growth data boosted the odds of a soft landing. The S&P 500 Index (S&P) was up 5.89% for the quarter, with the Bloomberg US Aggregate Bond Index not far behind with a 5.20% quarterly return. The Bloomberg US Government Treasury Index was up 4.71% as the Treasury yield curve bull steepened, with two-year yields 1.07% lower and ten-year yields down 0.58%.
- All of the Bloomberg US Aggregate Bond Index spread sectors outperformed treasuries on a duration adjusted basis, led by agency mortgage-backed securities (MBS), as measured by the Bloomberg US MBS Index, at 0.78%, and investment grade corporates, as measured by the Bloomberg US Corporate Index, at 0.77%. All of the below-investment-grade "plus" sectors outperformed as well: the Bloomberg US High Yield Index returned 5.28%, the Bloomberg Emerging Markets USD Aggregate Bond Index rose 5.82%, and the Morningstar LSTA US Leveraged Loan Index returned 2.09%. The US dollar dropped, as measured by the US Dollar Index (DXY) 4.8% and West Texas Intermediate (WTI) crude oil was 16.4% lower.

Performance Review

- In the third quarter, Pioneer Strategic Income Fund's Class Y shares returned 6.33%, while the Fund's benchmark, the Bloomberg US Universal Index (the Bloomberg Index), returned 5.20%.
- Sector allocation benefited principally from the 4% in catastrophe bonds, which witnessed high premiums. In addition, the 12.1% in non-agency MBS, the 11% overweight to financials and the 5% overweight to industrials helped.
- Interest rate factors contributed. The relative long duration of 0.53 years outperformed as yields fell. In addition, the yield curve steeper position outperformed, benefiting from the overweight to the 5-year key rate duration and underweight to the 20-year key rate duration.
- Currency exposure benefited primarily from the 2.5% exposure to the Euro, as rate differentials fell as the market priced in rate cuts by the Fed.
- The lower relative quality of industrials, and to a lesser extent, financials benefited from the overweight to issues rated BBB and below.
- Security selection outperformed as strong performance within financials more than offset underperformance within industrials and to a much lesser extent, agency MBS. Financials reflected strong performance of surplus notes of a US insurer, as well as of European bank and select US regional bank securities. Industrials were hurt primarily by underperformance of distressed emerging market corporate issues. Agency MBS were hurt by the overweight to higher coupon issues, as lower coupons rallied on falling rates.
- While overall quality had a positive impact, the credit hedge detracted from performance as high yield outperformed over the quarter.

Market Outlook and Positioning

- The US economy has experienced stronger growth than anticipated this year, but is gradually decelerating. The once overheated labor market has cooled, with companies reducing their hiring rates, yet layoffs have remained relatively low thus far. To trigger a recession in the US, an increase in layoffs is likely necessary. Although the Fed's shift towards a less restrictive policy and emphasis on employment downside risks lessen the threat of recession, we believe a hard economic landing is still possible. The re-emergence of the "Powell put" has also decreased downside risk for corporate and securitized credit bonds. Currently, spreads in these credit-sensitive areas are relatively (and historically) narrow, suggesting that investors have already accounted for limited downside risk. We continue to be selective in our credit exposures and believe that higher-quality bonds within credit-sensitive sectors may offer better relative value. While yields remain attractive relative to inflation, the market has factored in a very aggressive trajectory for Fed rate cuts over the next year. We anticipate a greater likelihood of curve steepening due to rising long-term Treasury rates in the coming quarters, driven by increased issuance to address substantial government deficits, which will push term premiums higher, in our view.

The **Bloomberg US Universal Index** is unmanaged, and represents the union of the US Aggregate Index, the US High Yield Corporate Index, the 144A Index, the Eurodollar Index, the Emerging Markets Index, the non-ERISA portion of the CMBS Index, and the CMBS High Yield Index. Municipal debt, private placements and non-dollar-denominated issues are excluded. The **US Treasury Index** is an index based on recent auctions of US Treasury bills and is commonly used as a benchmark when determining interest rates, such as mortgage rates. The **S&P 500 Index** measures the performance of the broad US stock market. The **Bloomberg US Aggregate Bond Index** is a broad-based flagship benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. Indices are unmanaged and their returns assume reinvestment of dividends and do not reflect any fees or expenses. It is not possible to invest directly in an index.

The portfolio is actively managed and current information is subject to change. The sectors/holdings discussed should not be considered recommendations to buy or sell any security.

Glossary of Frequently Used Terms

Advanced Refunding Bond (usually applies only to municipal bond funds) – A bond issued to retire, or pre-refund, another outstanding bond more than 90 days in advance of the original bond's maturity date.

Basis Point – A unit of measure used to describe the percentage change in the value or rate of a financial instrument. One basis point is equivalent to 0.01% (1/100th of a percent) or 0.0001 in decimal form. In most cases, it refers to changes in interest rates and bond yields.

Beta – measures an investment's sensitivity to market movements in relation to an index. A beta of 1 indicates that the security's price has moved with the market. A beta of less than 1 means that the security has been less volatile than the market. A beta of greater than 1 indicates that the security's price has been more volatile than the market.

Breakeven(s) – The difference(s) between the yield of a nominal bond and an inflation-linked bond of the same maturity.

Bull Steepening - Occurs when short-term interest rates fall faster than long-term interest rates.

Carry – The cost or benefit of owning that asset.

Correlation – The degree to which assets or asset class prices have moved in relation to one another. Correlation ranges from -1 (always moving in opposite directions) through 0 (absolutely independent) to 1 (always moving together).

Credit spreads (or spreads) – The differences in yield between Treasuries and other types of fixed-income securities with similar maturities.

Credit Risk Transfer Securities – Securities that transfer a portion of the risk associated with credit losses within pools of conventional residential mortgage loans from the government-sponsored entities (GSEs), Fannie Mae and Freddie Mac, to the private sector.

Dot Plot – The Fed's "dot" plot/projection is a quarterly chart summarizing the outlook for the federal funds rate for each of the FOMC's members.

Duration – A measure of the sensitivity of the price (the value of principal) of a fixed income investment to a change in interest rates, expressed as a number of years.

Dividend Yield – Refers to a stock's annual dividend payments to shareholders, expressed as a percentage of the stock's current price.

Excess returns – represent investment performance generated by a security or portfolio that exceed the "riskless" performance of a security generally perceived by the market to be risk-free, such as a certificate of deposit or a government-issued bond.

Goldilocks – An economy that is not too hot or cold, in other words sustains moderate economic growth, and that has low inflation, which allows a market-friendly monetary policy.

Hedge – An investment utilized to help reduce the risk of adverse price movements in an asset. Normally, a hedge consists of taking an offsetting position in a related security to help guard against a swift change in price, such as purchasing a "put" (sell) or "call" (buy) option contract on a stock in which the investor already owns shares outright.

Insurance-linked securities – Investments sponsored by property-and-casualty insurers to help mitigate the risk of having to pay claims in the wake of natural disasters.

Liquidity Premium – Any form of additional compensation that is required to encourage investment in assets that cannot be easily and efficiently converted into cash at fair market value.

Interest Rate Coverage Ratio – A debt and profitability ratio used to determine how easily a company can pay interest on its outstanding debt.

Loan Spread – The interest rates over and above the LIBOR rate charged to borrowers by banks.

Loan-to-Value (LTV) Ratio – A measure comparing the amount of a mortgage with the appraised value of the property. The higher the down payment, the lower the LTV ratio.

Municipal-to-Treasury Yield Ratio (municipal bond funds only) – A measure of municipal bond valuation. The higher the Municipal-to-Treasury ratio, the more attractive municipals are relative to Treasuries.

Mark to Market – Involves recording the price or value of a security, portfolio, or account to reflect the current market value rather than the book value.

Prepayment Risk – The risk involved with the premature return of principal on a fixed-income security. When principal is returned early, future interest payments will not be paid on that part of the principal.

Real Yield – The yield provided by an investment once inflation is taken into account.

Reinsurance -- coverage provided to insurance companies.

Rate-on-Line – The premium/coupon paid by the re/insurance company for coverage.

Standard Deviation – A statistical measure of the historic volatility of a portfolio; a lower standard deviation indicates historically less volatility.

Sharpe Ratio – A measure of risk-adjusted return that describes how much excess return an investor receives in exchange for the volatility of holding a riskier asset.

Spread sectors – Nongovernmental fixed-income market sectors that offer higher yields, at greater risk, than governmental investments.

Tail Risk – The additional risk of an asset or portfolio of assets moving more than 3 standard deviations from the current price, above the risk of a normal distribution.

Tax-Equivalent Yield – The pretax yield that a taxable bond needs to possess for its yield to be equal to that of a tax-free municipal bond.

Subordinated Capital/Financing – Financing ranked behind that held by secured lenders with regard to the order of repayment. Subordinated financing can be a mix of debt and equity instruments. Equity components may include options and warrants. Debt components may include asset-backed securities.

Yield Curve (Curve)– A yield curve is a line that plots the interest rates, at a set point in time, of bonds having equal credit quality but differing maturity dates.

Yield to Maturity – The total return anticipated on a bond if the bond is held until the end of its lifetime.

Yield to Worst (YTW) – The lowest potential yield that can be received on a bond without the issuer actually defaulting.

A Word about Risk

The market prices of securities may go up or down, sometimes rapidly or unpredictably, due to general market conditions, such as real or perceived adverse economic, political, or regulatory conditions, recessions, inflation, changes in interest or currency rates, lack of liquidity in the bond markets, the spread of infectious illness or other public health issues or adverse investor sentiment. Investments in high-yield or lower rated securities are subject to greater-than-average price volatility, illiquidity and possibility of default. The market price of securities may fluctuate when interest rates change. When interest rates rise, the prices of fixed income securities in the Fund will generally fall. Conversely, when interest rates fall, the prices of fixed income securities in the Fund will generally rise. Investments in the Fund are subject to possible loss due to the financial failure of issuers of underlying securities and their inability to meet their debt obligations. Prepayment risk is the chance that an issuer may exercise its right to prepay its security, if falling interest rates prompt the issuer to do so. Forced to reinvest the unanticipated proceeds at lower interest rates, the fund would experience a decline in income and lose the opportunity for additional price appreciation. The securities issued by U.S. Government-sponsored entities (e.g., FNMA, Freddie Mac) are neither guaranteed nor issued by the U.S. Government. The portfolio may invest in mortgage-backed securities, which during times of fluctuating interest rates may increase or decrease more than other fixed-income securities. Mortgage-backed securities are also subject to pre-payments. Investing in foreign and/or emerging markets securities involves risks relating to interest rates, currency exchange rates, economic, and political conditions.
